AMIT

Agentic AI & GenAI Engineer | Python & FastAPI Developer

Haryana, India (Open to Remote / Delhi NCR) | +91-7289094955 | theamitrwt@gmail.com

LinkedIn | GitHub | LeetCode | Portfolio

SUMMARY

MCA graduate (2026) who builds and deploys agentic AI and GenAI applications: multi-step LangGraph workflows, agentic RAG, FastAPI backends, vector search (ChromaDB, FAISS), and Docker deployment. Seeking an AI/GenAI, Python, or ML fresher or intern role. Available immediately.

EDUCATION

Banaras Hindu University, Uttar Pradesh, India — Aug 2024 – 2026
MCA (Software Engineering) — CGPA: 7.98

University of Delhi, New Delhi, India — Nov 2020 – Oct 2023
B.Sc. (Hons.) Computer Science — CGPA: 8.20

PROJECTS

Enterprise IT Support Agentic RAG Copilot | GitHub | Live Demo
Python, FastAPI, LangGraph, LangChain, ChromaDB, Groq LLM, Tavily, Docker, Render

- Built an agentic RAG IT-support copilot with LangGraph that retrieves from a private knowledge base, grades evidence sufficiency with an LLM, and falls back to Tavily web search with query rewrite and retry; returns source-cited answers.
- Built the ingestion layer: persistent ChromaDB store, local hash embeddings (no external embedding API), and recursive chunking for PDF, DOCX, TXT, and Markdown, behind an admin-key-protected upload endpoint.
- Delivered a FastAPI backend (chat, ingestion, health), SQLite audit logging, and a chat UI with citations and workflow trace; deployed on Render with a multi-stage, non-root Docker image.

MedInsight AI — RAG Medical Assistant | GitHub | Live Demo
Python, LangChain, FAISS, ONNX Runtime, Groq LLM, Streamlit

- Built a RAG medical assistant that ingests unstructured PDF, XML, and CSV records and returns context-grounded answers with cited source snippets.
- Implemented retrieval with ONNX embeddings (all-MiniLM-L6-v2), FAISS indexing, and relevance scoring; used prompt engineering with a Groq-hosted LLM for low-latency responses.
- Shipped a Streamlit app with streaming responses, session chat history, and chat export; trimmed heavy dependencies for lightweight cloud deployment.

Vendor Invoice Intelligence System | GitHub | Live Demo
Python, SQL (SQLite), Scikit-Learn, Streamlit, Plotly

- Built a freight cost prediction model (Linear Regression) with R^2 of 0.963 and RMSE of 124.66, outperforming Random Forest and Decision Tree baselines.
- Trained a Random Forest classifier (balanced class weights) on 5 engineered features, joining vendor and purchase SQL tables, to flag high-risk invoices.
- Built SQL-driven data pipelines and a Streamlit + Plotly dashboard for freight prediction, invoice risk scoring, and model comparison.

TECHNICAL SKILLS

Languages: Python, SQL, C++, JavaScript
Generative AI & NLP: Agentic AI Workflows, LangGraph, LangChain, RAG, LLMs, Prompt Engineering, Embeddings & Semantic Search, Vector Databases (FAISS, ChromaDB), Model Context Protocol (MCP), NLP
Machine Learning: Regression, Classification, Model Evaluation, Scikit-learn, Deep Learning Fundamentals
Backend & APIs: FastAPI, REST APIs, Streamlit
Data Analysis: Pandas, NumPy, Matplotlib, Plotly, EDA, Data Cleaning
Databases: PostgreSQL, MySQL, SQLite
Tools & DevOps: Docker, Git, GitHub
Web: HTML, CSS, Tailwind CSS, React
Core CS: OOP, DBMS, Data Structures & Algorithms

CERTIFICATIONS

- **LinkedIn Learning & Microsoft** — Career Essentials in Data Analysis
- **NPTEL (IIT Madras)** — Business Intelligence & Analytics (Elite, 84%)
